FEATURED SPECIES

Juncus effusus Common Rush

Wet Prairie / Emergent Marsh Rush

An interesting-looking graminoid species, this plant grows in full-to-partial sun, preferring damp-to-saturated soils. Blooming from early-to-mid-summer, this clump-forming species can grow to 4' tall. This is one of our most common rush species, often found in wet meadows, along stream corridors, and in other wetland habitats.

Pontederia cordata Pickereel Weed

Emergent Marsh Forb

An emergent aquatic species that can grow in water up to 1.5' deep, this marvelous plant produces 4" long flower spikes, ringed with bluish-purple flowers. Its elongated, heart-shaped leaves emerge out of the water on long stalks. Growing in full-to-partial sun, this species blooms in early-to-late summer. Its flower spikes are often used by dragonflies and damselflies as perches.
