

LOW-PROFILE PRAIRIE SEED MIX

This mix provides a diverse assemblage of shorter prairie grass and wildflower species. Most of the species will grow to four feet or less, making this an ideal mix for areas where a dominance of taller forbs and grasses is not appropriate. Once established, this wildflower community will display a variety of colors, blooming from early spring to late summer. This mix is suitable for medium-to-dry sites. The grasses in this mix will perform best in sandier soils. This seed mix includes at least 5 of 6 native permanent grass and sedge species and 26 of 30 native forb species.

FEATURED SPECIES

Schizachyrium scoparium Little Bluestem

Dry-to-Mesic Prairie / Savanna Grass

A classic grass species of the prairie, this plant grows 2'-4' in height and blooms from late summer to early fall. Preferring dry soils and full-to-partial sun, this clump-forming plant turns a brilliant reddish bronze in the fall. With its silver-white seed heads, this species adds visual interest to the landscape and provides crucial structural support for many shorter prairie wildflowers.

Eryngium yuccifolium Rattlesnake Master

Mesic Prairie Forb

An attractive plant with an unusual whitish, spiky, ball-shaped flower head, this 3'-5' tall plant prefers full sun and medium soils. With its waxy-green foliage reminiscent of yucca, this species blooms from mid-summer to early fall. Its common name is derived from the fact that Native Americans treated rattlesnake bites with a tea made from the roots.
