

# SEDGE MEADOW SEED MIX

A grass, sedge, and rush mix for level sites with saturated soil conditions (although it will tolerate drier soils late in the year), this mix creates a diverse habitat, offering a variety of cover and food options for wildlife. Many of the plants attract butterflies, some even attracting hummingbirds. This seed mix includes at least 13 of 17 native permanent grass, sedge, and rush species and 27 of 30 native forb and shrub species.

## FEATURED SPECIES

### *Scirpus validus* Great Bulrush

Emergent Marsh / Sedge Meadow Sedge

This sturdy graminoid species grows in moist soil and waters up to 2'-3' deep. Although it can grow in partially shaded conditions, it prefers full sun. It blooms between late spring and mid-summer. It can reach heights of 7' and is an important food source for waterfowl and aquatic mammals.

### *Lobelia cardinalis* Cardinal Flower

Wet Prairie / Swamp Forb

Few native species are as stunning as this wetland wildflower. One of a handful of native species in our region with red flowers, this is a hummingbird-pollinated plant. It is found in wet meadows, on pond and lake edges, and along stream corridors. Blooming from mid-summer to mid-fall, this 2'-5' tall plant is a self-seeding, short-lived perennial.
