

WOODED WETLAND ESTABLISHMENT SEED MIX

Use this mix in saturated, newly reforested areas to reduce weed competition and provide soil stabilization. As the reforested land becomes more shaded, some of the species in this seed mix will establish a permanent herbaceous understory layer and help fill out the maturing wooded wetland. This mix includes at least 11 of 13 native permanent grass and sedge species and 6 of 17 native forb or shrub species.

FEATURED SPECIES

Calamagrostis canadensis Bluejoint Grass

Wet Prairie / Sedge Meadow Grass

A slender plant of wet meadows and lake banks, this wetland grass blooms in mid-summer and prefers full-to-partial sun. Growing 2'-4' tall, this species is a perennial grass that spreads from its rhizomes.

Rudbeckia laciniata Wild Golden Glow

Floodplain Forb

A stately plant with 2"-4" wide yellow flower heads, this species prefers wet soils and full-to-partial sun. Its lower leaves are long and wide, each divided or deft into 3-7 leaflets. It grows up to 10" tall and can be found in wet meadows and along streams. It readily spreads by rhizome, creating dense stands.
